DETAILED ACTION

Response to Amendment

- 1. The 9/7/06 has been received and made or record. As requested claims 1-3,5,7,9,and 10 have been amended, claims 23 has been added, and claims 6, 15 and 21 have been cancelled.
- 2. Claims 1-5, 7-14,16-20, 22 and 23 are pending in the instant application.

Information Disclosure Statement

3. The information disclosure statement filed 3/30/06 has been received and made of record. Note the acknowledged form PTO-1449 enclosed herewith.

Allowable Subject Matter

- 4. Claims 1-5, 7-14 and 16-20 are allowed.
- 5. The indicated allowability of claim 22 is withdrawn in view of the newly discovered reference(s) to Lindqvist et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

Application/Control Number: 10/725,479

Art Unit: 3772

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

- 7. The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:
 - 1. Determining the scope and contents of the prior art.
 - 2. Ascertaining the differences between the prior art and the claims at issue.
 - 3. Resolving the level of ordinary skill in the pertinent art.
 - 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 9. Claims 22-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent NO. 6,207,875 ("Lindqvist et al.") in view of U.S. Patent No. 6,461,467 ("Blatchford et al.").

As regards claim 22, Lindqvist et al. disclose a wound dressing comprising an foam core (2) having opposed proximal and distal surfaces, and a skin adherent, facing layer (3) having apertures therein, consisting of an elastomeric gel and having a distal

Application/Control Number: 10/725,479

Art Unit: 3772

surface directly secured to the proximal surfaces of the absorbent core. Lindqvist et al. fail to teach at least two discrete sections having different degrees of skin adherence.

Blatchford et al., however, disclose a medical dressing with two adhesives, wherein one adhesive has greater adhesive tack than the other so as to allow the dressing to adhere to better to the skin at certain locations, for example, the periphery of the dressing, and adhere less to the portion which contacts the wound (abstract, col. 2, lines 12-20 and lines 31-38).

In view of Blatchford et al., it would have been obvious to one having ordinary skill in the art to provide the dressing of Lindqvist et al. with multiple adhesives such as that shown in Blatchford et al. in order to allow the center portion of the dressing which contacts the wound to adhere less than, for example, the periphery of the dressing to which surrounds the wound. This will allow the dressing to firmly adhere to the skin, but only at areas surrounding the wound.

As to claim 23, note the rejection of claim 22 above. In further regard to claim 23, Blatchford et al. disclose in one embodiment that the periphery of the bandage has the high tack adhesive (col. 2, lines 31-35). The high tack adhesive has greater skin adherence than the portion of the dressing located near the center (Figs. 1 and 4A). Thus, it would have been further obvious to provide the dressing of Lindqvist et al. with a border portion having a higher tack than the center of the dressing in order to allow the periphery of the dressing greater adherence to the skin.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kim M. Lewis whose telephone number is (571) 272-

5:00 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Patricia Bianco, can be reached on (571) 272-4940. The fax phone number

for the organization where this application or proceeding is assigned is 571-273-8300.

4796. The examiner can normally be reached on Monday to Friday, from 8:30 am to

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
